## **DigiOn unveils latest middleware 'DiXiM DMA 3.6' for Digital Media Player, and hardware dedicated Product Lines**

Fukuoka, Japan– January 8th, 2007 -- **DigiOn®**, Inc. today announced the latest DMA (Digital Media Adapter) Platform Software, version 3.6, and Hardware Dedicated Product Lines targeted the Sigma Designs SMP8634 and EM8622L.

DigiOn DiXiM is the brand name for home network middleware products which the company is providing. Including DLNA™ certified products, DiXiM middleware has been the choice of CE customers in the market.

Ver. 3.6 is targeted towards the value product line. It provides an Internet Browser feature on top of the existing DiXiM DMA for the Sigma Designs EM8620L chip. With a faster CPU and larger memory space, it provides stable operation and faster response times increasing the overall End User experience. It also supports 'Podcasting Data Playback'. Users can import URL lists through USB, and play back the content, even without using a PC. It opens a new era of non-PC usage digital media life. DiXiM DMA ver.3.6 will be available in Q1/2007.

Beyond DiXiM DMA ver.3.6, though still in the concept stage, ver.4.0 will be coming out as a flagship product late 2007. Not only supporting the Sigma Designs SMP8634 chip, but also features the newly developed 'Adaptive Module Architecture'. This new feature provides easier customization of the middleware as well as offering more flexibility for the method of accessing content.

Both ver.3.6 and ver.4.0 will be demonstrated at **2007 International CES** in Las Vegas.

Commenting on DiXiM DMA, Mr. Hisatoshi Taura, President of DigiOn, said:

"Now user can feel and operate DMA comfortably, with using DigiOn's latest DMA middleware which has superior interoperability and functionality. Hardware designated product line provides faster performance and optimization. Beyond the home network, I hope customers can access Internet data and playback contents with feeling no limitation."

### **About DigiOn**

DigiOn, Inc. is a software developer with experience in the development of multimedia, storage and networking products, and has established a firm position in the home network field. DigiOn, established in 1999, has its headquarters in Fukuoka and branch offices in Tokyo (Akasaka) and Taiwan (Taipei).

For details, please visit <http://www.digion.com/>.

\*DiXiM DMA Standard allows the DLNA™ Guidelines v.1.0 - based interoperability.

\*\*DiXiM DMA Premium allows playing back content such as recorded digital broadcast TV programs and protected content purchased at content service providers over a home network by its support for DTCP-IP and Windows Media™ DRM 10 ND.

\*\*\*DiXiM DMA HAK has passed "NSTL pre-submission test for PFS™" implemented by NSTL which is authorized independent testing lab for Microsoft® PlaysForSure™ logo program. To support PlaysForSure™ on final products, manufacturer is required to pass NSTL pre-submission test for PFS™ individually. PlaysForSure™ logo program is currently available only in U.S.A.
